N

OXFORD SCHOOL ATLAS

Oxford School Atlas has been trusted by generations of students, researchers and general readers for curacy and depth of cartographic detail. This completely new 34th CD edition of the atlas includes 200 and easy-to-understand maps with 94 thematic maps of India supported by charts and diagrams. The contains detailed physical and political maps related to India, new and informative preliminary pages, and sive coverage of core thematic issues such as climate, natural vegetation, wildlife, agriculture, minerals, try, demography, human development, environmental concerns, and natural hazards in a completely design and layout.

Features

rovides the latest available demographic and socio-economic data culled from authoritative sources, uch as *Census of India 2011*, *Statistical Year Book India 2013*, Planning Commission reports, *PRB 2012*, *DR 2013*, FAO, UNSD, WMO, The World Bank, British Geological Survey, etc.

ncludes separate physical and political maps of India and the continents

ontains new and informative thematic maps including 20 maps focussing on Indian agriculture, 15 maps n minerals and industries and 17 on demography and human development

eflects recent geopolitical and socio-economic developments, and climatic and environmental concerns ocussing on India and the world

rovides comprehensive coverage of the continents including thematic features of each continent, and egional maps of countries and regions

ncludes a new and informative section on 'World—Facts and Figures' comprising the latest information n each country including flags, 'World—Statistics', 'World—Geographic Comparisons', and a 'World—Time Zones' map

ontains a fully updated and revised index

The Companion CD-ROM contains:

- A slideshow on types of maps
- Animations explaining important geographical concepts
- Select regional maps of countries and regions of the world
- 53 urban area maps of India and important cities of the world
- Historical maps of India and the world
- Up-to-date key information on important international organizations
- Interactive games and quizzes
- Census 2011 statistics for each Indian district
- Printable quizzes and outline maps

llowing area figures do not add up to the total area of India because:
he shortfall of 7 sq. km area of Madhya Pradesh and 3 sq. km area of Chhattisgarh is yet to be resolved by the Survey of India.
isputed area of 13 sq. km between Puducherry and Andhra Pradesh is not included in either Puducherry or Andhra Pradesh.
rea figures include the area under unlawful occupation of Pakistan and China. The area includes 78,114 sq. km under illegal occupation of Pakistan, 5,180 sq. km illegally handed over by Pakistan to China and 37,555 q. km under illegal occupation of China in Ladakh district.
opulation figures exclude population of the area under unlawful occupation of Pakistan and China where census could not be taken.
opulation figures of India and Manipur include the estimated population of Senapati district of Manipur State.

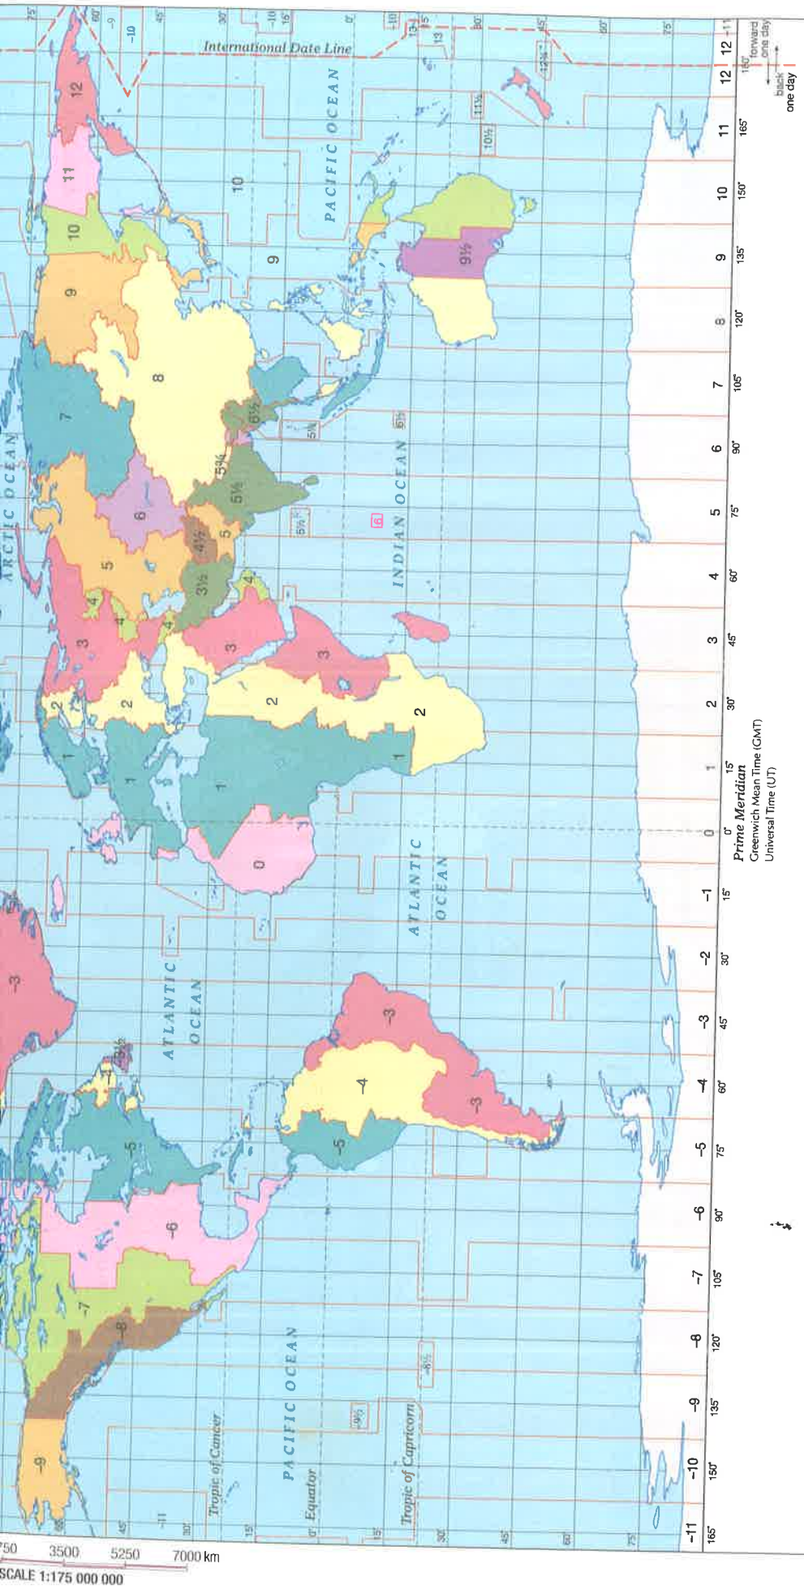
123-132 Index



THE WORLD CLOCK: The earth is a globe which rotates and spins on its axis, and the sun and stars appear to revolve around it from east to west, because the earth is rotating from west to east. In twenty four hours the earth makes a complete rotation on its axis. The velocity of the earth's rotation is 360° in twenty four hours, or 15° in one hour, or 1° in four minutes. A clock is simply a machine to indicate the speed of the earth's rotation and inform us of the subdivisions of time. We see at a glance that at any place on the meridian 15° east of Greenwich the clock is one hour later than at Greenwich, because the sun has risen one hour earlier, and at any place 15° west of Greenwich the clock is one hour later than the sun has risen one hour earlier, and another begins. While crossing from east to west one gains a day and loses the same while travelling from west to east. The line is not straight in order to avoid the landmasses which would be divided in terms of time and add to the complexity of time zones.

The 180° longitude is taken as the International Date Line where one calendar day ends and another begins. While crossing from east to west one gains a day and loses the same while travelling from west to east. The line is not straight in order to avoid the landmasses which would be divided in terms of time and add to the complexity of time zones.

Standard Time is the time kept on land. Countries may adopt a uniform or multiple time zones keeping in mind the extent of its boundaries longitudinally. Many countries also vary their time seasonally on account of the varying amount of daylight throughout the year. Such seasonal changes as 'Daylight Saving Time' is not shown on this map. Standard Time is measured in relation to the zero time zone, which is centered on the Greenwich or the Prime Meridian. The time in this zone is known as the Greenwich Mean Time or Universal Time.

Robinson Projecrion

How to use this Index

The place names or features in this index are arranged in alphabetical order. Each entry in the index starts with the name of the place or feature, followed by the name of the country or region in which it is located. This is followed by the number of the most appropriate page on which the name appears, usually the largest scale map. Next comes the coordinate reference i.e., latitude and longitude, which gives a more exact description of the position of a name or feature. For example, the index entry for Aachen is given as follows:

Aachen Germany (77) 50.47N 6.05E

Aachen is in Germany and appears on page 77. Its latitude is 50 degrees and 47 minutes north of the equator and its longitude is 6 degrees and 05 minutes east of the prime meridian.

Names of the physical features such as rivers, lakes, mountains, etc. are followed by a description, which has been shortened to one or two or three letters, e.g. Everest mountain is written as Everest, Mt The names of rivers have been indexed either according to their origins or according to their mouths.

Where there is more than one place with the same name, the country name is used to decide the order.

THE COMPANION CD-ROM CONTAINS

- A slide show on types of maps
- Animations explaining important geographical concepts
- Select regional maps of countries and regions of the world
- 53 urban area maps of India and important cities of the world
- Historical maps of India and the world
- Key information on important international organizations
- Interactive games and quizzes based on the maps in the atlas
- Census 2011 statistics for each Indian district
- Printable quizzes and outline maps

RECOMMENDED SYSTEM REQUIREMENTS

- Pentium IV or higher
- MS 2000/XP/Vista
- 256 MB RAM
- 128 MB graphics memory
- 1 GB available disk space
- 1024 X 768 True colour display
- CD-ROM drive
- Sound card and speakers
