

'His is a brain of extraordinary power'
Observer

When and how did the universe begin? Why are we here? Is the apparent 'grand design' of our universe evidence for a benevolent creator who set things in motion? Or does science offer another explanation? In *The Grand Design*, the most recent scientific thinking about the mysteries of the universe is presented in language marked by both brilliance and simplicity. Model dependent realism, the multiverse, the top-down theory of cosmology, and the unified M-theory – all are revealed here.

This is the first major work in nearly a decade by one of the world's greatest thinkers. A succinct, startling and lavishly illustrated guide to discoveries that are altering our understanding and threatening some of our most cherished belief systems, *The Grand Design* is a book that will inform – and provoke – like no other.

ACKNOWLEDGEMENTS

universe, you could have been a physicist. We are also grateful to our agents, Al Zuckerman and Susan Ginsburg, for their support and encouragement. If there are two messages they consistently provided, they were "It's time to finish the book already," and "Don't worry about when you'll finish, you'll get there eventually." They were wise enough to know when to say which. And finally, our thanks to Stephen's personal assistant, Judith Croasdel; his computer aide, Sam Blackburn; and Joan Godwin. They provided not just moral support, but practical and technical support without which we could not have written this book. Moreover, they always knew where to find the best pubs.

 Reality, 53-77. *See also* Model-
 dependent realism
 anti-realists, 60-1

Reality (*cont.*)

- classical picture of objective existence, 58–59
- five-dimensional space-time, 59–60
- goldfish bowl example, 53–4, 56
- holographic principle, 59–60
- law of nature and, 48
- model-dependent realism, 16, 58, 61–69, 216–17
- multiple histories, 15
- objective, question of existence of, 48
- “the past” and, 105–6
- Ptolemaic model of, 54–55, 54
- quantum physics and, 59–60, 87
- realists, 60–1
- simulated or alternative, 47
- Reference frames, 118–19
- Reflection, law of, 29
- Renormalization, 138–39, 145–46, 232
- Resonance, 202
- Salam, Abdus, 139–40
- Schönborn, Christoph, 208
- Scientific determinism, 43–44, 48, 92–93, 215–16
- Scientific method, 32–33, 48
- Second Life, 57
- Singularity, 165, 232
- Soul, 44
 - pineal gland as seat of, 44

Space

- curvature/curved spaces, 128–30
- planetary orbits and three dimensions, 204–5
- straws and lines, 150
- three dimensions of, 127, 180–81
- warpage by matter and energy, 169
- Space-time, 59–60, 232
 - cosmological constant, 205–6, 230
 - as curved and distorted, 128
 - as fourth dimension, 127–29
 - M-theory’s eleven dimensions, 151, 180, 181
 - string theory’s ten dimensions, 148–49, 150
 - warpage by gravity, 168–71, 170
- Standard model, 70, 143–44, 182, 211
- Stars, 31. *See also* Sun
 - explosions (supernova), 198, 201–2, 203, 206
 - mass, 192–93
- Stoics, 33
- Straus, Ernst, 210
- Strings, law of, 28–29
- String theory, 148–49, 211, 232–33
 - internal space, 148–49
 - ten dimensions in, 148–49, 150
- Strong anthropic principle, 197, 202–3, 209

- Strong nuclear force, 133, 202–3, 229, 233
 - QCD and, 140, 141
- Sum over histories, 96, 97–103, 107, 135, 173
